Week 11 Tutorial 03 — Threesum

Use big-step operational semantics to show that the function

```
let rec threesum = fun l ->  
  match l with [] -> 0 | x::xs -> 3*x + threesum xs
```

terminates for all inputs and computes three times the sum of the input list's elements.

Week 11 Tutorial 03 — Threesum

Proof by Induction on length of List

Base: $l = []$

```
let rec threesum = fun l ->  
  match l with [] -> 0 | x::xs -> 3*x + threesum xs
```

APP

`threesum [] \Rightarrow 0`
